Imprinting, schizophrenia, and aging investigated with mixed models and CommonMind data

Attila Gulyás-Kovács, Chess lab

Contents

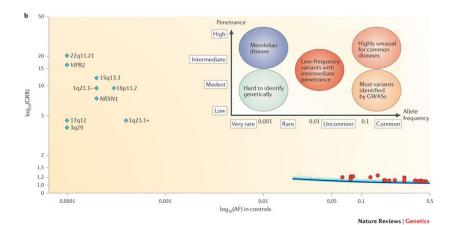

Introduction

Our previous work

Mixed models

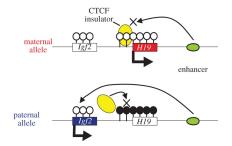

Our revised work

Schizophrenia: complex genetic architecture

Imprinting and allelic bias

- 1. roles
 - psychiatric?
 - mother-child interaction
 - neurodevelopmental
- 2. variation: age, tissue

Renfree et al 2012 Philos Trans R Soc Lond B

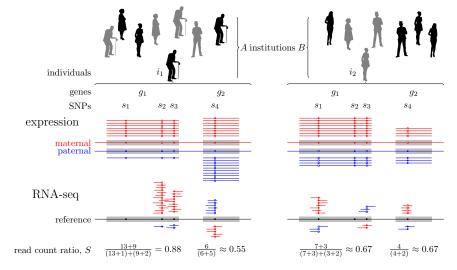

Our previous work

- CommonMind Consortium data
- 30 imprinted genes in DLPFC, some novel
- found allelic bias to depend on SCZ, age
 - genes varied
 - weak statistical support
- mixed models: more power
- found allelic bias to depend on age but not SCZ
 - genes varied

Our revised work

- CommonMind Consortium data
- 30 imprinted genes in DLPFC, some novel
- found allelic bias to depend on SCZ, age
 - genes varied
 - weak statistical support
- · mixed models: more power
- found allelic bias to depend on age but not SCZ
 - genes varied

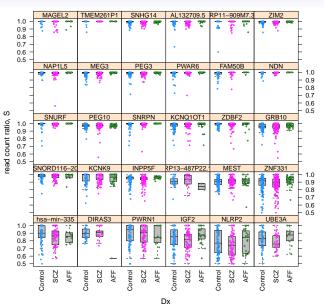

Read count ratio measures allelic expression bias

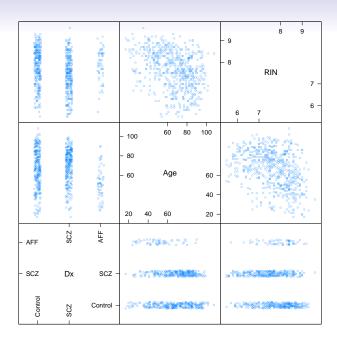

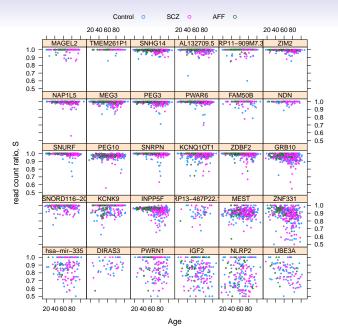

The data

	read count ratios			explanatory variables			
i	Y_1		Y_{30}	X_1	X_2		X_{12}
Individual	MAGEL2		UBE3A	Dx	Age		RIN
1	NA		NA	AFF	42		6.90
2	1.00		NA	AFF	58		7.00
3	NA		0.89	AFF	28		6.90
:	:	:	•	:	:	:	:
576	0.97		NA	Control	42		8.50
577	1.00		NA	SCZ	27		7.50
578	1.00		NA	Control	57		8.60
579	1.00		1.00	Control	28		7.70

Fitting mixed models on the CommonMind data

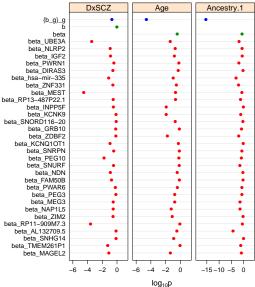

fitted value

mixed: gene specific mixed: gene nonspecific earlier fixed effects model

Summary

- · caution: model fit
- dependence of read count ratio on...

anatory variable	gene nonspecific	gene specific
zophrenia (Dx)		
Age		
Ancestry.1,3		
Gender		

- interpretation
 - 1. no detectable link between imprinting and schizophrenia
 - 2. age, genetics and gender affect imprinting; genes vary

Summary

- caution: model fit
- dependence of read count ratio on...

explanatory variable	gene nonspecific	gene specific
Schizophrenia (Dx)	-	-
Age	-	+
Ancestry.1,3	-	+
Gender	_	+

- interpretation
 - 1. no detectable link between imprinting and schizophrenia
 - 2. age, genetics and gender affect imprinting; genes vary

Summary

- caution: model fit
- dependence of read count ratio on...
